MADE IN GERMANY

## **petDog Health 2114** Dandruff, itching shampoo for dogs

- Shampoo for dry, flaky skin
- Reliably removes dry dog skin
- Lastingly prevents dandruff
- Quickly eliminates unpleasant odours
- Increases the moisture content of the skin

### **Is there anything I need to consider before use?**

Shake the bottle well and vigorously! Only in this way can the active ingredients be optimally distributed in the liquid.

### **How to use the shampoo?**

- Thoroughly wet the coat and skin surface with clean water. If you use a sponge for this purpose, make sure that the skin gets wet. If you place the animal in the bath, it is advisable to place a rubber mat underneath to prevent the animal from slipping.
- Apply the special shampoo in several places on the neck and along the back. Gently massage the shampoo into your pet's entire coat and skin. Use enough shampoo to soap all areas.
- Rub the shampoo first on the head, neck, back and belly area, then on the legs. Avoid the eyes, nose and mouth. For hard-to-reach areas (between the toes, at the ears or under the base of the tail), it is recommended to use a sponge or washcloth.
- For the successful effect, it is important that special shampoo is carefully rubbed into the skin. Especially thoroughly should be treated ears, lip folds and other badly affected areas of the skin.
- Leave the shampoo on your dog's skin for 5 to 10 minutes. After the exposure time, rinse the shampoo thoroughly with lukewarm water.
- Allow the dog to shake itself and then dry it off. Do not let your dog out in the cold afterwards while it is wet.

### **Duration of application (acute case):**

The special shampoo should be used twice a week for extremely dry skin.

### **Duration of application (precaution):**

As a preventive measure, the shampoo should be applied approx. every 14 days. With permanent use, the use of another shampoo can be dispensed with.
